

PRICE LIST

High Intensity Focused Ultrasound

HIFU (High Intensity Focused Ultrasound) is a new-generation skin tightening and lifting treatment that is rapidly gaining in popularity as a non-invasive, painless and no downtime alternative to a facelift. HIFU uses focused ultrasound pulses that penetrate the deeper layers of the skin; these high energy pulses cause a tightening of existing collagen bundles and stimulate new collagen formation.

Face Only	R1400
Neck & Jowls	R1100
Face & Neck	R1900
